

Business Characteristics

Provides necessary security measures for mobile applications

1. Protects against attacks that threaten mobile apps

- Implements security features such as obfuscation and tamper prevention in the app's source code to robustly protect the app's security

2. Visualize the security status on the dashboard

- Monitor, analyze, and collect the operational status of each solution
- Get an overview of security statuses at a glance and document them

Matching Needs

Ideal profile of Tokyo companies

(1) Client companies

- Businesses offering mobile applications as a service platform
- Companies requiring vulnerability assessments

(2) Partner companies

- Trading companies providing cybersecurity-related solutions and services

Objective

(1) Market development (client and partner acquisition)

(2) Finding partner companies

Our company contributes to the safety and security of society by employing cybersecurity technologies to counter increasingly sophisticated cyberattacks. If you are interested in our solutions, please feel free to contact us.

Business Overview (Services/Products)

- Aims to enhance customer cybersecurity by making cutting-edge technology easily accessible

■ MobiShell series

- Enhances security by implementing features such as source code obfuscation and tamper prevention in mobile applications
- A range of diverse security measures are available, such as screen capture prevention and virtual keypads, as needed
- Easy implementation minimizes time and costs

- Serving over 200 clients across various industries in South Korea (Financial institutions, general companies, government offices, etc.)

■ Penetration tests

- A white-hat hacker conducts penetration testing from an attacker's perspective to identify vulnerabilities and provide actionable countermeasures
- Extensive implementation record with major financial institutions (banks, securities, fintech, etc.), government agencies, and large corporations in South Korea
